Office Action Summary	Examiner	Art Unit					
	Khanh V. Nguyen	2817					
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply							
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Drawings

Figures 7-10 should be designated by a legend such as —Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Applicant admitted PRIOR ART, Pullen et al. (6,304,137).

Pullen et al. (Fig. 2) disclose an amplifier circuit comprising: a low pass filter (L2, C2); a switching section having a first switching element (M4) and a second switching

Application/Control Number: 10/646,768

Art Unit: 2817

element (M3); a first coil (L4), a second coil (L3), high potential (+BUS), low potential (-BUS); a first high sped diode (D5) having its cathode connected to the high potential (+BUS), and an anode connected between the second coil (L5) and the second switching element (M3) at a node, and a second high speed diode (D6) having its cathode connected between the first coil (L4) and the first switching element (M4) at a node, and its anode is connected to the low potential; and the low pass filter (L2, C2) connected between the first and second coils (L4, L3) at a node.

Claim 2 is rejected under 35 U.S.C. 102(b) as being anticipated by Pullen (6,249,182).

Pullen (Fig. 7) discloses an amplifier circuit comprising: an amplifier (10) can be read as an analog amplifier; a low pass filter including a coil (26) and a capacitor (28); and elements between the output of amplifier (10) and coil (26) can be read as a digital amplifier; and a feedback circuit comprising a second capacitor (CAPZ) and resistor (RA) connected in series having the connection and function thereof.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Khanh V. Nguyen whose telephone number is (571) 272-1767. The examiner can normally be reached from 8:00 AM - 3:30 PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Pascal can be reached on (571) 272-1769. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9306 for regular communications and (703) 872-9306 for After Final communications.
